CLARIFIER SERIES® 2.0

Advanced Filtration For You & Your Family

FILTERS

Master Water Clarifier Series 2.0 filters are specifically designed to effectively and efficiently treat a wide range of water problems, from both city and well sources. These filters are engineered to use water efficiently, conserving your water supply while reducing the wear and tear on well systems. With Clarifier Series 2.0 filters, you get the quality water you want without all the minerals, odors, tastes, or acidity you don't.

System Features & Benefits:

- **Adjustable cycle sequencing** conserves water and maintains well performance
- **Neutralizes** acidic water that can corrode plumbing systems
- **Turbidex** reduces particles that can enter into household water
- **Carbon** reduces chlorine taste and smell common with municipal water
- **Metered Control** regenerates based on water usage and provides technicians with detailed history and diagnostic information
- **Service Alarms** based on time and or gallons to optimize maintenance schedules

Advanced Filtration For You & Your Family

FILTERS

Advanced Cycle Sequencing

The Clarifier Series filters feature advanced electronics, including "*adjustable cycle sequencing*." This allows complete programming of each cycle, making it ideal for low-producing wells.

Vortech DISTRIBUTION TECHNOLOGY

Acid Neutralizing Filter

Acidic water will be corrosive to your plumbing system and can often be treated with a neutralizing filter that will raise the pH by adding necessary minerals.

Turbidex — Particle Reduction

This high quality, granular zeolite media is produced from a unique mineral deposit that has high surface area and porosity, making this media preferred over conventional filtration medias.

Carbon — Taste and Odor

Enjoy fresh, chlorine free water from every faucet. This low maintenance system provides filtered water throughout the home without the ongoing costs and hassles of changing cartridge style filters.

Versatile Filter

In some cases, a household system simply needs a little extra filtering. This flexible backwashing filter is used to treat a multitude of water problems, based on the media used.

	Clarifier Series 2.0 Acid Neutralizer		Clarifier Series 2.0 Filter	
	1054	1354	1054	1354
pH Correction	6.0	5.5		
Applications	**Neutralizes Water** • Corrects low pH • Reduces corrosion • Adds beneficial hardness that can be removed by the Satin Series 2.0 softener if desired		**Filters Water** • Various medias available to address specific water conditions
